222 137 261 Séba is a kind of long, poisonous, black turnip which is eaten only in times of famine and after protracted cooking.

Seba and vidiba caused the death of many people during the last Mossi famine by giving them dysentery.

137 231 /511/ As for wild fodder found in Mossi territory, there is first of all kénibédo, that grows in bunches 30 centimeters high in damp hollows. Its leaves are rudimentary. It is severed 20 centimeters from the ground and stored during the dry season.

Then there are the fodder plants belonging to the papilionaceous family, densa and youbenga. The tiny stem of densa or youbenga is not severed from the plant itself, which reaches a height of 0.30 or 0.40 meter in both cases. Horses eat them either green or dry, indiscriminately.

137 314 283 Finally, let us say a word about souga, a sort of wild hemp called thus by the Mossi. The Nounouma call it boupo, and the Kassouna bénédévio. It is found only in certain parts of Mossi territory, but it grows throughout Gourounsi lands. Its bark yields very tough white fibers which the natives use in the manufacture of rope, string or thread for fishing implements. The bark does not keep through the dry season, so it is reduced to fibers during the rainy season. The fibers, on the other hand, can take the most intensive dryness without deteriorating. Souga is not cultivated.

222 433 We are now finished with Mossi gathering activities. They have a certain importance, as we have just seen, the same one on the whole as in other Sudanese populations. They are infinitely less important than cultivation, of course, but only slightly less so than stockbreeding, and they must be placed on the same level as the hunt. They are far more important than fishing or arboriculture.

245 433 The latter deserves no real mention. It hardly exists among the Mossi. It is limited to what we described earlier about the rônier and to the planting, here and there, of a few papaw trees.

433 In short, cultivation comes first, with stockbreeding trailing far behind, then gathering and hunting on the same level, then fishing and finally arboriculture.

010 /512/ Industries flourish among the Mossi. We shall review one by one, in detail, the various trades they exercise.
